ABOUT THE SERVICE PROVIDER

Hull University Teaching Hospitals NHS Trust is a large acute Trust situated in Kingston upon Hull and the East Riding of Yorkshire. The Trust was established in October 1999 through the merger of the former Royal Hull Hospitals and East Yorkshire Hospitals NHS Trusts. In February 2019, the Trust changed our name from Hull and East Yorkshire Hospitals NHS Trust to Hull University Teaching Hospitals NHS Trust. We employ just over 7,000 whole time equivalent staff, have an annual income of £561 million and we have two main sites. The two main hospital sites are the Hull Royal Infirmary and Castle Hill Hospital. Outpatient services are also delivered from locations across the local health economy area.

We provide a full range of urgent and planned general hospital services, covering the major medical and surgical specialties, routine and specialist diagnostic services and other clinical support services. These secondary care services are provided to a catchment population of approximately 600,000 in the Hull and East Riding of Yorkshire area. The Trust also provides specialist and tertiary services to a catchment population of between 1.05 million and 1.25 million extending from Scarborough in North Yorkshire to Grimsby and Scunthorpe in North East and North Lincolnshire respectively. The only major services not provided locally are transplant surgery, major burns and some specialist paediatric services. The Trust is designated as a Cancer Centre, Cardiac Centre, Vascular Centre and, Major Trauma Centre. The Trust is also a university teaching hospital and a partner in the Hull York Medical School and a clinical research institution with the University of Hull as our key partner. The close working relationships with Hull York Medical School and the University of Hull along with the Trust's strengthen commitment to research also informed the change of name to Hull University Teaching Hospitals NHS Trust. The Trust also supports the Abdominal Aortic Aneurysm (AAA), Antenatal and Newborn, Breast and Diabetic Eye national screening programmes.

The local health system served by the Trust centres on the City of Kingston Upon Hull, its suburbs and the surrounding East Riding of Yorkshire, a rural area containing a number of market towns. Hull is a geographically compact city of approximately 260,000 people. It was identified as the third most deprived local authority in England in 2017 (Index of Multiple Deprivation, Department of Communities and Local Government). The health of people in Hull is generally worse than the England average, with life expectancy for both men and women being lower than the England average and approximately 28% of children living in low income families. The health and wellbeing of children in Hull is also worse than the England average.

The East Riding of Yorkshire is predominantly a rural area populated by approximately 340,000 people. The geography of the East Riding makes it difficult for some people to access services. Life expectancy for men is higher than the England average and approximately 11.6% of children live in low income families. The health and wellbeing of children in the East Riding of Yorkshire is better than the England average. The age profiles of the two areas vary significantly with Hull having a higher proportion of residents aged 20-29 years, while East Riding of Yorkshire has twice the number of people aged 50 years and over. Whilst the ethnicity of the two populations is predominantly white, Hull has a higher percentage of residents who are either South Asian, Black, mixed race, Chinese or other origin.

AIMS AND OBJECTIVES

In May 2019 the Hull University Teaching Hospitals NHS Trust approved its Trust Strategy for 2019 to 2024. This includes the Trust’s clinical service and quality improvement strategies. The Strategy sets out the Trust’s approach to the achievement of our vision by defining some long term goals, setting the scope and level of ambition for each goal over the next five years and providing guidance on the approach we plan to take to take in achieving these goals. A copy of the Trust’s Strategy can be found here: <https://www.hey.nhs.uk/about-us/corporate-documents/#trust-strategies>

The vision of the Trust is: **‘Great Staff, Great Care, Great Future’**

We believe that by developing an innovative, skilled and caring workforce, we can deliver great care to our patients and a great future for our employees, our Trust and our community. We have developed seven long term goals which when achieved will make the three element of our vision a reality:

Our mission is to lead the provision of outstanding care and contribute to improved population health, by being a greater employer and partner, living out values and spending money wisely.

We have developed a set of organisational values in conjunction with our staff and these form the basis of a Staff Charter which sets out the behaviours which staff expect from each other and what staff can expect from the Trust in return.

OUR VALUES

CARE

We are polite and courteous, welcoming & friendly. We smile and we make time to listen to our patients and staff. We consider the impact our actions have on patients and colleagues. We take pride in our appearance and our hospitals and we try to remain positive.

We do not treat anyone unfairly. We do not let our mood affect the way we treat people. We don't talk negatively about colleagues or other teams. Offensive language, shouting, bullying and spreading rumours are unacceptable.

HONESTY

We tell the truth compassionately. We involve patients in decisions about their care and we are honest when things go wrong. We always report errors and raise concerns we have about care. Our decisions and actions are based on facts not stories and opinions.

We do not withhold information from colleagues or patients. We never discourage staff from reporting concerns. We are not careless with confidential information. We do not present myths as facts.

ACCOUNTABILITY

We are all responsible for our decisions and actions and the impact these have on care. All staff are responsible for maintaining high standards of practice and we take every opportunity to continuously learn. Everyone is encouraged to speak up and contribute their ideas to improve the care we provide.

We do not unfairly blame people. We positively embrace change and we don't discourage people from having opinions. Controlling behaviours and silo working should not be exhibited in our trust.

Remarkable people.
Extraordinary place.
